

TEXTURIZATION

For over a century, B. F. Perkins has designed and manufactured web converting, finishing and embossing machinery for paper, textile, plastic, metal and other sheet producing industries. As a division of Roehlen Industries, B. F. Perkins is part of a four company group with manufacturing facilities throughout the world, and is a subsidiary of Standard International, a N.Y.S.E. listed company, headquartered in Andover, Massachusetts. Standard International has over 45 separate divisions.

Perkins TEXTURIZERS are working right now putting decorative and functional patterns of such diverse products as polyester dress fabrics, wall paper, gift wrapping, shoe materials, paper towels and wood grain house siding of aluminum, steel or PVC. This line of equipment ranges from small table top TEXTURIZERS for finishing photographs to six foot wide paper embossers for publication grade fine papers.

It is little wonder, with over one hundred years experience and current expertise in manufacturing and engineering, that STUDIO-TEX and PHOTO-TEX are the industry leaders in photographic print TEXTURIZATION.

Continued leadership in PHOTOFINISHING'S dynamic new dimension, TEXTURIZATION, is a challenge we at PERKINS gladly accept. . .

After all . . . that's our business!

B. F. Perkins photographic products are available through authorized dealers

The Perkins Photo-Tex is the ultimate in quality, heavy duty texturizing. Designed for all photo finishers' uses including the demands of constant, high production capacities. Photo-Tex is a "work horse" built to give many, many years of economical service.

FEATURES:

- Easy to operate—anyone can texturize
- Dual hydraulic pressure systems for consistently even texturizing
- Engraved steel pattern roll is chrome plated for long life
- Geared rolls enable two side (male-female) texturizing for greater depth and pattern selection
- 18 Standard patterns and unlimited custom patterns
- Tension control clutch for let-off and rewind of roll paper (optional) gives maximum control
- Variable speed motor allows best operator control
- Floor mount for greater stability
- Self aligning ball bearings for long life
- Safety guards for greater protection
