DCP-760 DIGITAL COLOR PRINTER

The DCP-760 is a thermal dye sublimation digital color printer that can be used in conjunction with compatible photographic printer-paper processors. This printer uses digitally scanned data, to produce digital images on an index print, sticker print, or through a personal computer to print seven different digital print formats.

The DCP-760 has several advantages. First, the DCP-760 produces up to 60 4 x 6 inch index prints per hour. Second, the DCP-760 is flexible as it will create prints that range in size from 3.5 x 5 inches up to 7 x 9.3 inches. In addition to larger size prints this unit can accommodate output in high definition format which means operators can take images from either Advanced Photo System or 135 and 120 negative films.

Customers will also be happy when they notice enhancements to the printing media used by the DCP-760. There are no longer perforations on the left and right sides of the prints. Previously the tabs had to be removed before a print could be presented to the customer. With the DCP-760, this task is no longer necessary; the prints come out more like regular photographs. The amount of packaging to be recycled has also been reduced by making the ink cartridges refillable. When a roll of ink has been used up, it can be removed from the plastic holder and replaced with a new one, it is not necessary to replace the entire cassette every time.
